INTRODUCTION

Key Benefits

CHARGE YOUR WAY

Flexible and customisable platform, with full white labelling available

SMART CHARGING COMPLIANT

Fully compliant with UK Smart Charging Regulations

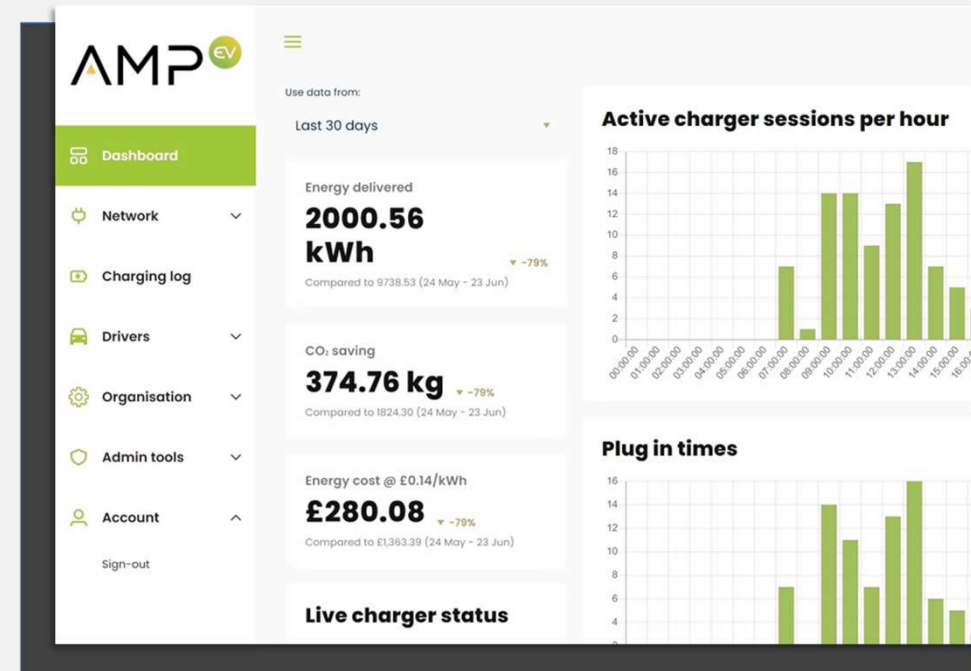

WIN MORE BUSINESS

Enhanced functionality, scalable across use cases

EXCELLENT CUSTOMER EXPERIENCE

24/7 EV charger and driver support, with a dedicated customer success team for smooth onboarding

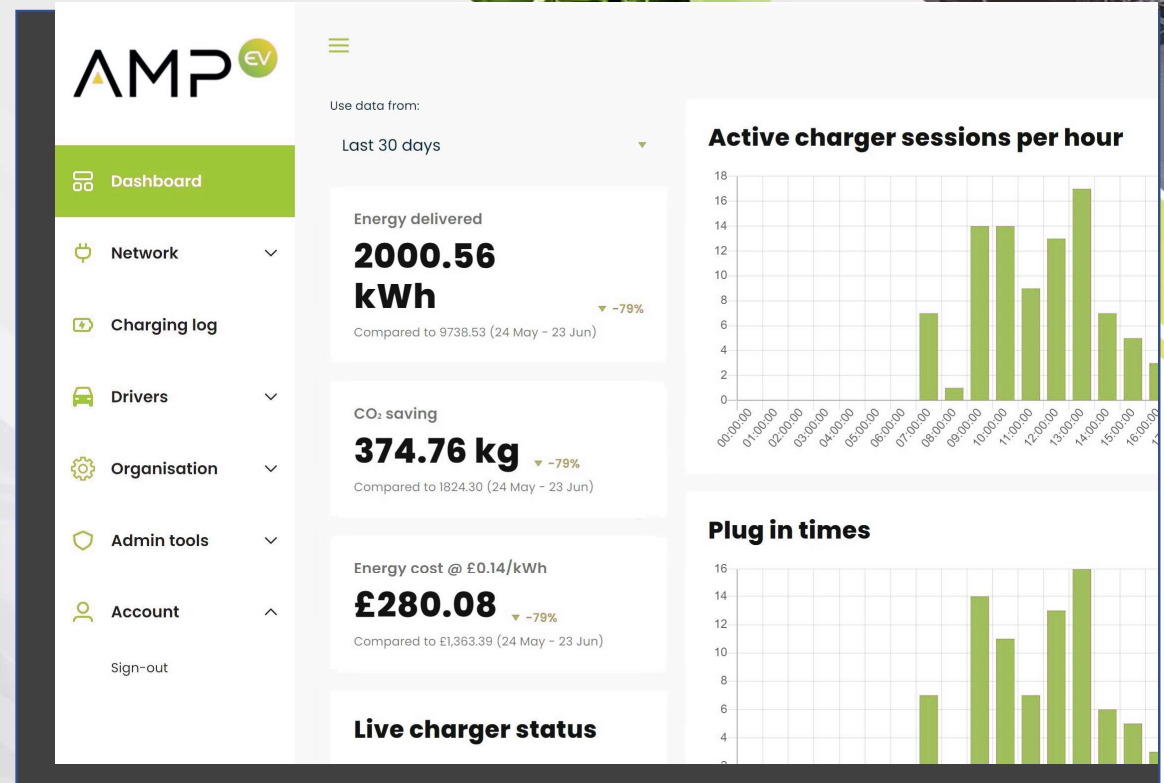

CORE PLATFORM

Take control of your chargers

AMP EV starts with a central platform for managing, monitoring and operating your chargers. AMP EV Core allows for the essentials of charging and reporting and gives you the tools and the add-on modules to maximise your charging investment.

Key Features of Core

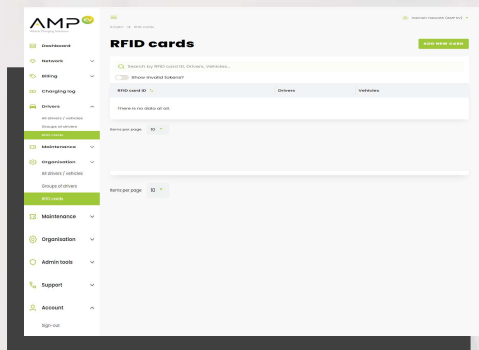

- ✓ Manage all your chargers in one back office system
- ✓ Use chargers from multiple vendors in the same network
- ✓ Supports any number of chargers
- ✓ Add, view and manage your network of chargers
- ✓ Start charging with RFID cards
- ✓ Comprehensive reporting including OZEV compliant reports
- ✓ Complete flexibility with Access Controls

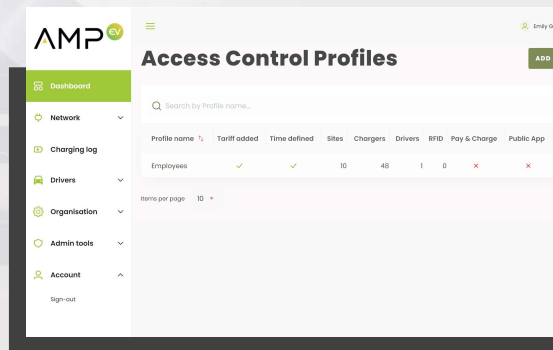

AMP EV

CORE PLATFORM

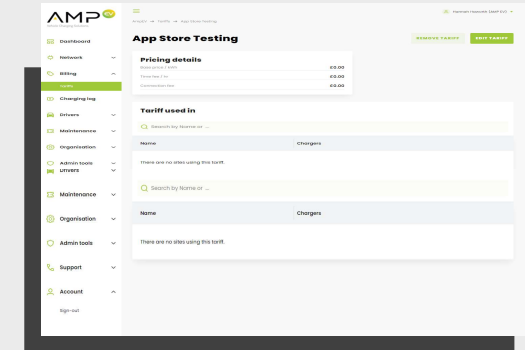

Ultimate flexibility with Access Controls

Assign RFID tokens to
drivers and/or vehicles

Create Unlimited
Access Profiles

Control tariffs*, times of the day
and chargers with each profile

*Setting tariffs only available with Billing

CORE PLATFORM

Time availability

Select the days of the week

Please choose the days and times that this access control profile will be applicable. Use the day picker, and type the start/end times into the inputs. NB - the start of the day is '00:00'.

Days **All days** ▼ Start at 00:00 → End at 23:59

Open your chargers up to the general public when your own drivers aren't using them to generate revenue for you and your clients*

Add users

Here you can pick which users this access control profile will apply to. Click the tabs below to see the available choices. If there's too much to easily see what you want, type in the search bar to filter the visible items. Clicking 'Select all' will select or deselect all the items in the currently visible tab.

DRIVERS **GROUP OF DRIVERS** **VEHICLE** **RFID CARD**

Search drivers...

The screenshot shows the 'Confirm Booking' screen of the Chargin' app. At the top, there's a red back arrow and the title 'Confirm Booking' in a large, bold, black font. Below the title is a section titled 'Site information' in a bold, black font. Under this section, there's a white card with a red illustration of a calendar with three rings at the top, a red pencil, and a red bell. The calendar has a grid with three rows and three columns. The top row has two red checkmarks in the second and third columns. The middle row has a red checkmark in the first column. The bottom row is empty. Below the illustration, the text 'Booking confirmed!' is written in a bold, black font. Underneath this, there's a paragraph: 'We'll share the Charger ID code 30 minutes before your session starts.' The words '30 minutes before' are in a bold, black font. Below this paragraph, there's a line of text: 'Enable push notifications in your Settings for updates to your Booking.' The words 'Enable push notifications' are in a bold, black font. At the bottom of the white card is a dark blue button with the text 'VIEW BOOKINGS' in a white, bold, sans-serif font. Below the white card is a dark blue button with the text 'CONFIRM' in a white, bold, sans-serif font.

Flexible & Agnostic

We are hardware agnostic, built to OCPP open standards meaning you can add any combination of chargers across your site, regardless of manufacturer.

There's no more vendor lock in and you can control all of your chargers across your network from one back office system.

50 connectors configured

IS CHARGING UNIT?
This will trigger whether the charger is live on the Fuuse system and added to your invoice in your agreed terms. When the charger is not live, it will be marked as 'Not Live'. Once the charger is marked as live, it cannot be marked as 'Not Live'.

Not Live

PREPENDING SCHED
☐ Disabled

EVSE NAME
This is the name by which Operators and Drivers will refer to the charger. This is usually reflected on the charger itself.

Super2

EVSE COMMUNICATION TYPE

Private - domestic
Private - workplace
Public

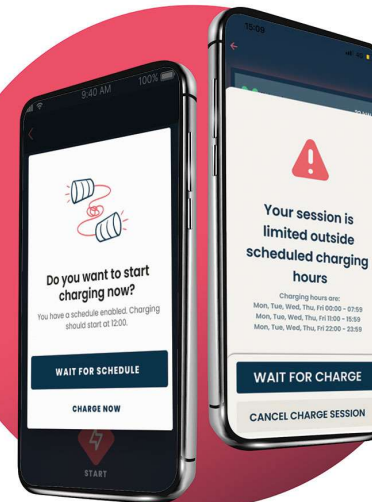

OCPP / HARDWARE ID
This is the OCPP ID for the charger. This is the unique identifier for the charger. If this ID is not entered, the charger will not be able to connect to the Fuuse system and may require a site visit to resolve.

SUPER1

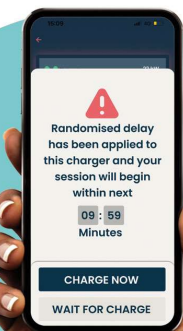

SETTING CHARGERS TO PRIVATE

12 MONTHS OF DATA

DEFAULT OFF PEAK SCHEDULING

RANDOMISED START TIMES

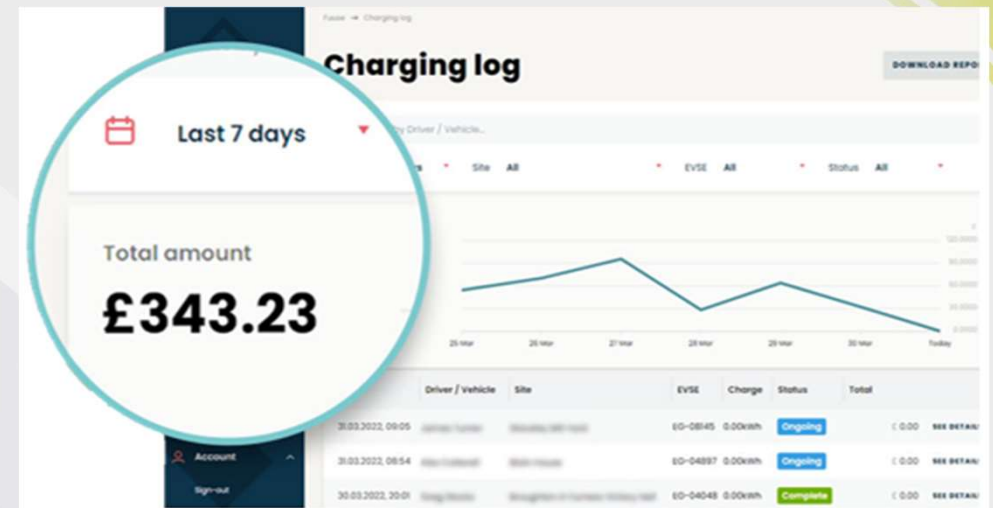

PLUS SECURITY FEATURES COMPLIANT WITH NEW 30 DEC LEGISLATION

Charging Data

The legislation requires the entirety of the preceding 12-month period of charging data be stored and available to the charge point owner.

With the platform, operators can view and download the following charging data from the past 12 months:

- ✓ **Session dates/times**
- ✓ **Drivers/vehicles**
- ✓ **Site**
- ✓ **EVSE**
- ✓ **Total kWh**
- ✓ **Total revenue (where applicable)**

Default Off-Peak Scheduling

Default hours are pre-set in the platform for all new chargers with sessions avoiding peak electricity demand.

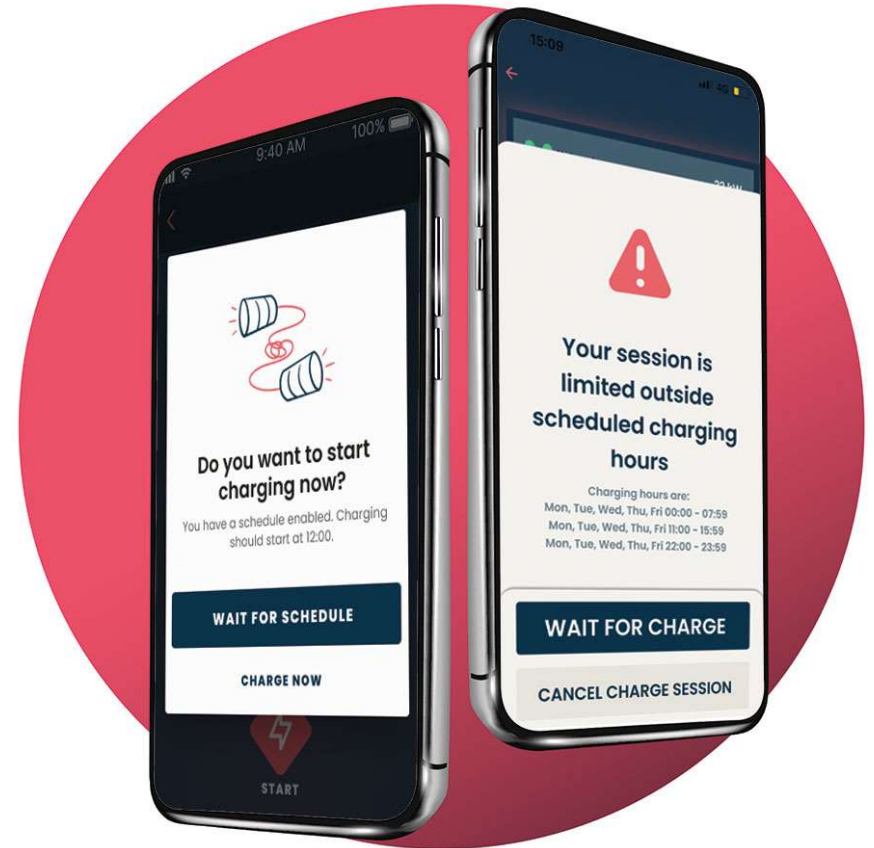

No charging between 8am and 11am, and 4pm and 10pm weekdays

In domestic chargers, **drivers can** override these default schedules.

In workplace chargers, **only the operator can** override the default schedule.

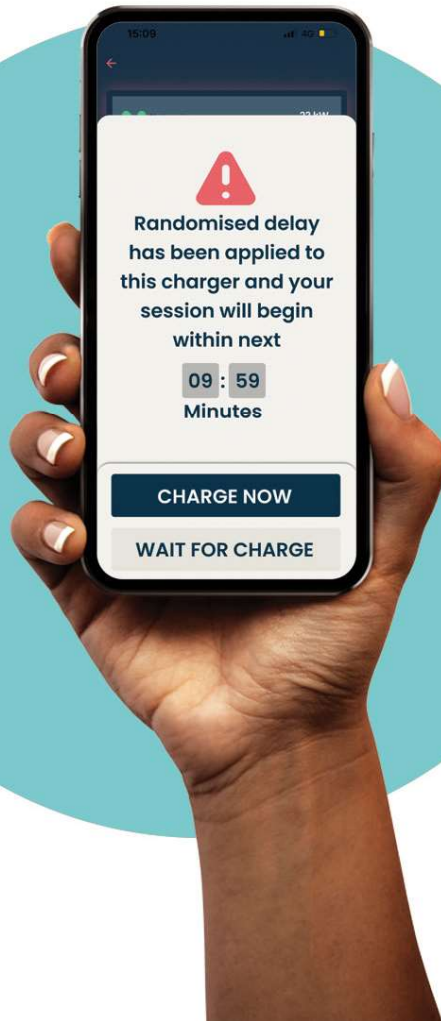

Randomised Start Times

To minimise the impact on the grid, a randomised delay is set on all charging sessions, including those pre-scheduled.

The delay can be any duration to the nearest second, up to 1800 seconds.

This **can** be overridden by **both** the operator and the driver, in both domestic and workplace settings.

Charger Security

The legislation regarding specific security requirements came into force on **30 December**.

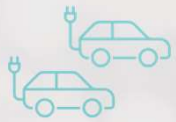

We are ready to work with all OCPP 1.6J manufacturers make sure compliance is delivered in the following areas:

- Firmware updates
- Secure communication
- Security log of issues reported over OCPP
- Notification of security issues

EV CHARGING SOFTWARE

At a glance

Unlock Revenue

- ✓ Open chargers to the public
- ✓ Manage opening times & driver groups
- ✓ Manage multiple tariffs
- ✓ Subscriptions and overstay fees
- ✓ Payments fully managed
- ✓ Full financial reporting

Control Access

- ✓ Authorised drivers only
- ✓ Manage opening times for driver groups
- ✓ Control charging methods
- ✓ Unlimited access profiles
- ✓ Assign RFIDs

Dynamic Maintenance & Support

- ✓ Click to fix remote features
- ✓ Automated fault reporting
- ✓ Issue tracking
- ✓ Charger health logs
- ✓ 24/7 driver support

Smart Charging Compliant

- ✓ Fully compliant for home and workplace
- ✓ Randomised start times
- ✓ Default off peak scheduling
- ✓ 12 months charging data
- ✓ Security compliance

Comprehensive reporting

- ✓ Holistic data view at work, home and on the road
- ✓ OZEV compliant reporting
- ✓ Monitor CO2 and Nox savings

Intuitive Driver App

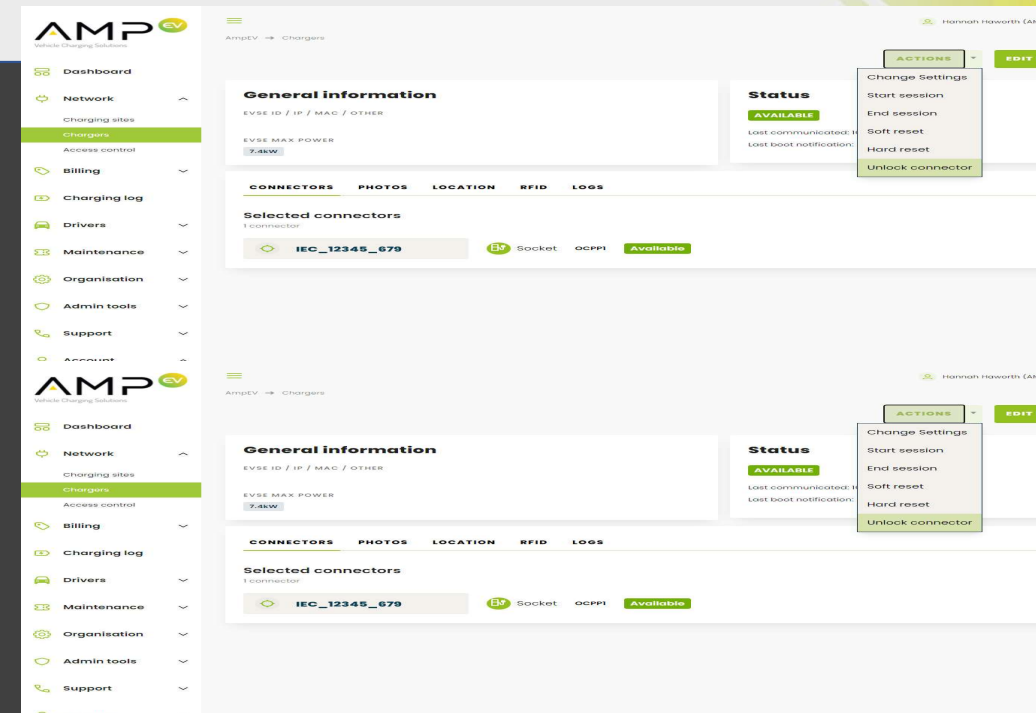

- ✓ Easy session starting
- ✓ Accidental end control
- ✓ Real time session tracking
- ✓ Discover nearby chargers
- ✓ Direct issue reporting

Take control of your chargers

A central platform for managing, monitoring and operating your chargers.

- **Manage all your chargers in one back office system**
- **Use chargers from multiple vendors in the same network**
- **Supports any number of chargers**
- **Add, view and manage your network of chargers**
- **Start charging with RFID cards**
- **Comprehensive reporting including OLEV compliant reports**
- **Complete flexibility with Access Controls**

MAINTENANCE

Maximise Uptime

For charge point operators, installers and those with large networks of commercial chargers, we go far beyond simple charger issue reporting. We provide a comprehensive service that monitors network health and ensures your chargers are back up and running as soon as possible.

- **Driver fault reporting**
- **Automated fault reporting**
- **Alert system via email and SMS**
- **Track open issues**
- **Click-to-fix remote maintenance**
- **Troubleshooting tools**

A screenshot of a web interface for managing a charger. The interface is divided into several sections. At the top right, there is a 'Status' section with a red 'UNKNOWN' label and a list of actions: 'Start session', 'End session', 'Soft reset', 'Hard reset', and 'Unlock connector'. Below this, there is a 'Charger1' section with a 'General information' box containing 'EVSE ID / IP / MAC / OTHER: OCPPTEST1844F' and 'EVSE MAX POWER: 22kW'. To the right of this box is another 'Status' section with a red 'UNKNOWN' label and a list of actions: 'Start session', 'End session', 'Soft reset', 'Hard reset', and 'Unlock connector'. At the bottom, there is a 'CONNECTORS' section with a 'Selected connectors' box containing '1 connector' and a list of connectors: 'IEC_62196_T2' and 'Socket'. The interface is clean and modern, with a white background and blue accents.

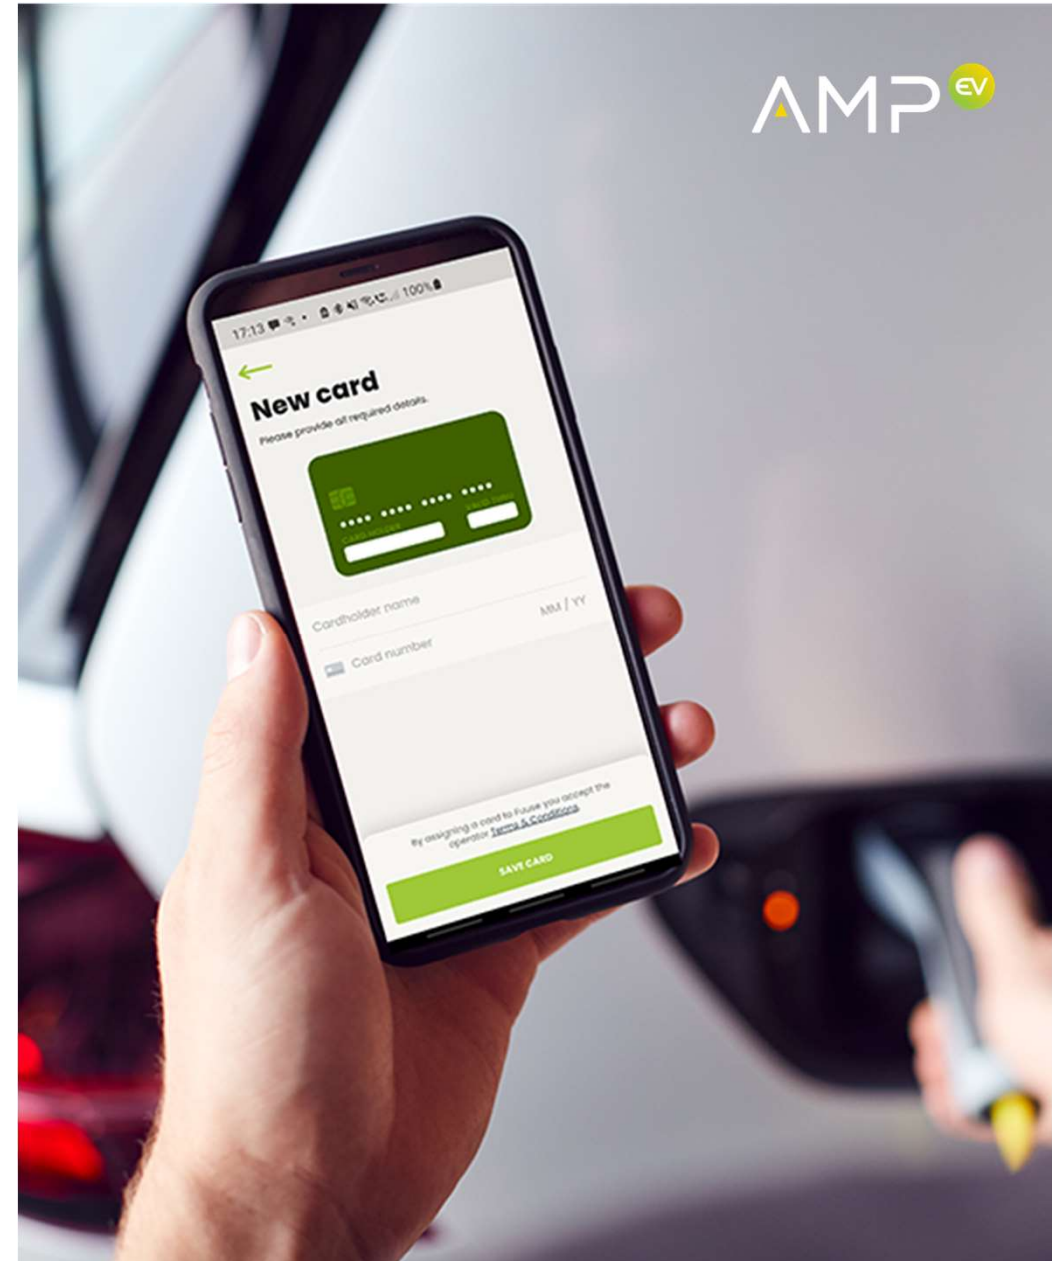

BILLING

Generate Revenue

Whether your clients are a charge point operator, a visitor destination, local authority or anyone looking to receive payment for charging, you need a comprehensive set of tools to best serve their customers. Billing is a secure PCI compliant solution that gives you the freedom to start generating revenue from charging points.

Key Features of Billing

- ✓ Collect payments directly from drivers
- ✓ Add payment details
- ✓ Securely store driver card and payment details
- ✓ Full financial reporting through Stripe
- ✓ Payment dispute resolution
- ✓ See financial data about specific chargers or your entire network in real-time
- ✓ Automated invoicing
- ✓ Manage tariffs and subscriptions
- ✓ Create different user groups with separate tariffs
- ✓ Charge connection, parking and overstay fees
- ✓ Have different tariffs for different times and days
